SUMMARY

BSc (Hons) Computing with AI graduate specializing in Data science, machine learning and applied NLP, with hands-on experience building RAG pipelines, predictive models, and full-stack AI applications using Python, PyTorch, GenAI and LangChain. Proven ability to ship systems end-to-end, from data preprocessing through deployment.

EDUCATION

BSc (Hons) in Computing with AI — Islington College, Kamalpokhari, Kathmandu Feb 2024 – Present
+2 — Capital College and Research Center (CCRC), Kathmandu 2021 – 2023
SEE — Siddhartha Shishu Sadan, Janakpur

EXPERIENCE

Full-Stack Web Development Intern — Armistech Pvt. Ltd. Nov 2025 – May 2026

- Developed and optimized responsive full-stack booking system interfaces using JavaScript, HTML5, and CSS3, seamlessly connecting frontend views with backend RESTful APIs.
- Engineered JWT-based authentication and user registration workflows, strengthening application security through token-based session management and strict input validation.
- Designed database schemas, optimized SQL query performance, and fixed critical application bugs while collaborating with cross-functional teams via Git version control.

PROJECTS

Qurehealth.AI (React.js, Node.js, MongoDB, Python, RAG, FAISS)

- Built an AI-powered healthcare platform combining disease prediction, doctor recommendation, and a RAG-based chatbot by integrating FAISS vector search with LLM-backed retrieval across a React/Node/MongoDB stack.

Conversational RAG Backend (FastAPI, Claude 3 API, Pinecone, Redis, Docker, AWS EC2, Nginx, Certbot)

- Engineered and deployed a production-grade RAG backend on AWS EC2 using Docker and Nginx reverse proxy with HTTPS/SSL (Certbot) and DuckDNS. Integrated Claude 3 and Pinecone for vector retrieval, Redis for multi-turn conversational memory, and FastAPI/SQLAlchemy for structured session persistence.

Review Extraction Pipeline (Python, LangChain, Groq, FastAPI, MongoDB, Streamlit, LangSmith)

- Automated extraction of sentiment, themes, and pros/cons from raw product reviews into structured JSON by building FastAPI endpoints, MongoDB persistence, and a real-time Streamlit analytics dashboard.

Bean Disease Classification (PyTorch, Deep Learning, Computer Vision, Gradio)

- Built and benchmarked Baseline CNN, improved CNN, and ResNet18 models for bean leaf disease detection, achieving **94.5% accuracy** with the top-performing model, deployed via a Gradio interface for live predictions.

TECHNICAL SKILLS

Languages: Python, SQL, HTML, CSS, JavaScript

ML / AI: Generative AI, PyTorch, LangChain, Claude API, RAG, Deep Learning, Computer Vision, NLP, Statistics/Linear Algebra, Machine Learning

Data & Databases: Data Structures And Algorithms, NumPy, Pandas, MySQL, Oracle, Vector Databases, ETL

Cloud & Tools: AWS (EC2, Security Groups), Nginx, Docker, Certbot, Git, GitHub, n8n

CERTIFICATIONS

- AWS Academy Machine Learning & AI
- AWS Academy Data Engineering
- Understanding Natural Language Processing
